

R1

Sample getContent Curl

```
curl --location  
'https://www.learnerai-dev.theall.ai/content-service/scores/GetContent/word?  
tags=CEFR_GEN_R1_P1&contentlimit=1&gettargetlimit=5&language=en'
```

R1-P1

```
https://www.learnerai-dev.theall.ai/content-service/scores/GetContent/word?  
tags=CEFR_GEN_R1_P1&contentlimit=1&gettargetlimit=5&language=en
```

To get the content for **P2** through **P15**, keep the URL the same as **P1** and just change the **tags** parameter—for example, use **tags=CEFR_GEN_R1_P2** for **P2**, **tags=CEFR_GEN_R1_P3** for **P3**, and so on up to **tags=CEFR_GEN_R1_P15**.

R2

For **R2**, follow the exact same pattern—just swap **R1** for **R2** in the **tags** value.

Example: **tags=CEFR_GEN_R2_P1** for **P1**, **tags=CEFR_GEN_R2_P2** for **P2**, all the way up to **tags=CEFR_GEN_R2_P15**.
